Scientific and Technical Information Center

Requester's Full Name: AKASH K. SINGH Examiner #: _____ Date: _____
 Art Unit: _____ Phone Number 30 _____ Serial Number: _____
 Mail Box and Bldg/Room Location: 1000 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names):

Earliest Priority Filing Date:

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

City Yanks Contract From Dillingham

Flaherty, Colin

San Diego Business Journal (San Diego, CA, US), V11 N51 s1 p1

PUBL DATE: 901217

WORD COUNT: 647

DATELINE: San Diego, CA, US

TEXT:

...largest inflicted on a company for failing to comply with the city's affirmative action **policies**, city officials said.

Dillingham submitted in September the **low bid** for the Alvarado Filtration Plant-Joint Laboratory Facility, one of the most expensive projects ever...

...Equal Opportunity Programs," Pratt said. "Such a history of callousness, or callous disregard, cannot be **rewarded**."

Lockwood said that "the bottom-line issue here is the proof is in the pudding..."

...sexual quotas -- a practice recently outlawed by the U.S. Supreme Court. San Diego's **policies** are goals that a company must make a "good faith" effort to meet, even if it does not reach them, Lockwood said.

The next **lowest bid** on the project was \$10.5 million by M.H. Golden. But the council cannot take that offer because state law compels the city to accept only the **lowest bid**. The project will be readvertised. Members of the Citizens Equal Opportunity Commission praised the

AU 200012044	A			G06F-017/60	Based on patent WO 200041108
--------------	---	--	--	-------------	------------------------------

Abstract (Basic): WO 200041108 A1

NOVELTY - The product for bidding is identified and the bid for product is received from a bidder, during **auction** session. When the bid from bidder is greater than that of remaining bids, it is determined whether the bidder is qualified to receive a **reward** , based on the **reward rule** . If the **bidder** is qualified, an indication is transmitted to the bidder.

DETAILED DESCRIPTION - The **reward** includes value of currency, supplement to bit, rebate on the product, amount of frequent flier miles, secondary product, service and warranty for the product, etc.

INDEPENDENT CLAIMS are also included for the following:

- method of providing **penalty** to bidder;
- method of participation in **auction** session;
- apparatus for **rewarding** bidder;
- apparatus for providing **penalty** to bidder;
- program product

USE - For **rewarding** bidder in on line **auction** environment during sale of luxury items, antiques or high ticket items via LAN, WAN, internet, intranet, public telephone exchange system, etc.

ADVANTAGE - Encourages **competitive bidding** and discourages unreasonable bit submission by providing **reward** or **penalty** to bidder.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart illustrating the steps performed by **auction** server.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 5974398	A	25	G06F-017/60	

Abstract (Basic): US 5974398 A

NOVELTY - The computed bid values related to retained advertiser, are transmitted from network to user. The selected bid value corresponding to selected advertiser is received from user and advertising message related to selected advertiser is transmitted from network to user, for display. A **reward** corresponding to selected bid value is offered to user, based on the selected advertiser.

DETAILED DESCRIPTION - The advertiser's maximum and minimum bids for absentee bidding, are received at the network side. The user profile and two user characteristic specifications associated with respective advertiser, on the network are accessed. The user characteristics from the user profile is compared with that from advertiser specification. If one of two selected advertisers has a maximum bid less than the first **highest** maximum bid, the corresponding advertiser is dropped from bidding. If the selected advertiser has a maximum bid greater than the second **highest** minimum bid, then the corresponding advertiser is retained in the bidding. An INDEPENDENT CLAIM is also included for advertisement information access management system in internet.

USE - For access management of advertisement information for online, interactive information and entertainment services in network such as internet, telephone, cable television, direct television, satellite communication and radio frequency communication networks, and also for tennis bulletin board.

ADVANTAGE - The database uses customer interest profiles and online service usage data to identify particular user characteristic to advertisers. The advertiser can also interact directly with the online service platform, for e.g. by interacting with a human representative of the online service, or automatically using conventional automated response platforms. Enables usage of conventional procedures for storing and retrieving from databases. The value of the offer or bid **auctioned** to the user can be established based on the user's income or age.

DESCRIPTION OF DRAWING(S) - The figure shows the online advertising service in internet.

Claims

Claim

... the famous "Revenue Equivalence" theorem holds. This theorem states
that WI auctions in which the **bidder** with the **highest** value wins, and
the one with the lowest value loses and pays zero, are equivalent...

...s point of view. Note that the procedure we present below, which is a
second price **auction** with a reservation price, does not belong to this
class, and hence the Theorem is...

...to announce a positive reservation price which might result with
no trade),

A second price **auction** with a reservation price: Price and Price-like
Second price **auctions** are well known, The rules are as follows:

0 Seller chooses a reservation price r ...

...procedure is terminated with i) no trade. Otherwise,

0 The winner is the bidder whose **bid** was the **highest** (it

there is a tie -then the winner is chosen by a random device),
0...

...the seller and the other buyers pay zero. Remarks.

1) At first blush, such an **auction** procedure looks inferior from a revenue point of view when compared, say, with the first-price **auction** (a similar procedure except that the winner pays his own price and not the second). However, such a naive view ignores the effect of the procedure's type on how **competitive** the **bidders** are.

2) An, important advantage of this procedure is that it is very simple and transparent to follow. When the bidders and the **auctioneer** argue on the same variables a dominant strategy for a buyer is to bid his value...

...bidders may be concerned with different variables than those that are of interest to the **auctioneer**.

3) For a seller to choose a positive reservation price makes sense only if it...

...the seller's belief on how the buyers' values are distributed.

4) We described an **auction**. However, a similar description consider- Of course, the **lowest bidder** wins here and Max is replaced by Min

in determining the deal is actual price,

Multi-dimensional Second Price **Auction**

If the only detail yet to agree upon is price (or price-like), then all
...

...in the utility layer, we shall treat both f and $g(\cdot)$ as functions that map re-scribed **penalties**. That is, the lower it is for a party, the better is for that party...

...each party evaluates the deal according to his function (this provides a uniform treatment for **auctions**, **reverse auctions**, bartering **auctions** etc.). In such a case, it is important to first reveal the value function of the **auctioneer** to the bidders. One possibility is to reveal to the bidders the true value function, which was submitted by the **auctioneer**. Another possibility is to give the **auctioneer** an option to reveal a modified value function, denoted by $g'(\cdot)$, according to his strategic choice. Without loss of generality let $g'(\cdot)$ be the disclosed value function. So, first the **auctioneer** reveals his value function $g'(\cdot)$ (by publishing his GPA-- constraints, preferences and targets, arranged in K levels in lexicographical order) and then the bidders bid. Let the **auctioneer**'s reservation price is given in terms of ...the seller's targets) subject to his own constraints as well as those of the **auctioneer** (i.e., both, OP, and GPA) and while not crossing the threshold values specified for...

...K

GP,

GPA

The first set of hard constraints forces the solution to meet the **bidder**'s threshold **specifications** (first) at each level of his objective function. The second set of constraints restricts the bid so that it gives the **auctioneer** at least what he announced as his threshold levels g^*_1, \dots, g^*_K

. $k, At \dots$

...the bidder tries to respond, as best as he can under the constraints. to the **auctioneer**'s objectives (according to their lexicographical order). The, **auctioneer** selects the winning bid as the one associated with the smallest value for g^*_0 ...

...optimize his own objective function subject to the constraint that the selected values will give the **auctioneer** at least the utility obtained

...allows him to choose one of four approaches to determine whether to stay in the **auction** in light of the optimal valueftx *) that was achieved as shown above.

1 The...

Detailed Description

Detailed Description

... invention, depicted in Fig. 1, comprises a method for interactive collection, exchange and redemption of **reward** points relating to products or services. First, a user is identified (20). In one embodiment...

...to the user is then retrieved from a personal data store (22). A list of **reward** options is then presented to the user (24). Exemplary **reward** options may include merchandise (i.e., computers, software, PDA's, wireless phones, etc.) and experiences (i.e., travel, celebrity interactions, exclusive privileges, etc.). Potential **reward** options include a **reward** auction, in which the user can bid on a **reward** item with his/her **reward** points. The user's selection corresponding to the list of **reward** options is received (26). The user is then prompted to enter a bid value (28) corresponding to the selected **reward** option. The bid value is received from the user (30). In one embodiment, a check...

...cover the bid. After receiving the bid value, the bid value is compared against a **high bid** value to determine if the user's bid is greater than the **high bid** (31). If the user's bid value is not greater than the **high bid** value, the user is prompted to enter a **high bid** value (55). After the user's bid is received and determined to be greater than the **high bid**, a **bid fee** is deducted from the user's point balance (32). The bid fee ranges from...

...fee is a pre-determined number of points. At the pre-determined end of the **auction**, the user's bid is compared against any other bids to determine if the user...

...the bid value is deducted from the user's point balance (38) and the selected **reward** option is provided to the user (40). If the user did not win the **auction**, the user is returned to the list of selection options. In one embodiment, the user...

...the method of the present invention can be utilized with a wide variety of **auctions** such as reverse, Dutch, English and the like.

Preferably, the method comprises the ability to...

Detailed Description

Detailed Description

... low bidders for a House Seat for a policy.

5 To win the auction, the **bid** from the lowest **bidding** constituent must meet the following **conditions** : (1) it is in the **lowest** pool of **bids** in a politician's district or have combined with the **lowest bidder** , either voluntarily or through **penalties** ; (2) the **low bidder** 's politician must support the **policy** , (3) the public policy must be enacted and enforced, and (4) the **low bidders** representing politician must be in the smallest group of legislators necessary to pass the legislation, who represent the **lowest bidding** pool of **bidders** , including their combined and penalized bidders. Because a politician will probably not respond to a...

...avoid the penalties through joining special interest groups. A penalty is imposed on the pool of **lowest bidders** from the same district who fail to gain their legislator's support for their policy legislation, but from inferior **auctions** , for failing to gain the support of their politician for an efficient public policy. For example, the innovator will be able to penalize the **lowest bidder** if the **bidders** ' representing politician fails to support the policy in a committee vote. **Penalties** , combinations and the threat of future **penalties** should encourage urgency and hopefully encourage cooperation, while minimizing frivolous bids by those without political...from a district who support candidates during primary and general elections and who are the **lowest bidders** in their district in their superior **auction** have the right to penalize the **lowest bidders** from the same district, but from inferior **auctions** , for failing to gain the support of the politician for an efficient public policy and the right to combine them with the next **lowest bidder** . For purposes of the present application, a **penalty** is defined as an action taken by the **lowest bidder** of a superior **auction** to reduce the **bid** of the **lowest bidder** in the next active inferior **auction** , when the **lowest bidder** fails to gain the support of the politician for the efficient public policy. For example...

...contributors in a politician's district for a primary election will be able to penalize the **lowest bid** ders from the general primary election **auctions** for that district, if the elected politician fails to support the policy before committee votes...

...the fate of a bill) and before floor votes. In a similar example, 1) the **lowest bidders** in the primary level **auction** will be able to penalize and combine special interest groups, who are the **lowest**

bidders in the active general election level **auction** , 2) the **lowest bidders** in
-14~

the general election **auctions** will be able to penalize and combine special interest groups bidding in the committee and floor level **auctions** and 3) the innovators can penalize the **lowest bidding** lobbyist, if the innovator activates the lobbyist **auction** and primary election **auction low bidders** . These combinations are done with a formula that penalizes and adjusts for the number of...

...interest groups at a level are exhausted, or the politician commits support to the policy. **Penalties** , combinations and the threat of future **penalties** are intended to encourage competition, while minimizing frivolous bids by those without political influence. In...bidder in step 400 before repeating the process. If the lowest bidder in the superior **auction** 0 invokes a **penalty** at step 402, a **penalty** process is conducted in step 406 and the new **lowest** intradistrict **bid** is identified in steps 408 and 410. The new intradistrict **low bid** is published in step 412 before repeating the process. Now referring to FIG.

15, if...FIG. 22, if the politician commits to the proposed policy at step 612, only the **lowest** intradistrict **bidders** can **bid** up or down in step 614. Otherwise, if the **lowest bidder** in the superior **auction** invokes a warning at step 616, the **low bid** is published to intradistrict bidders and observers in step 620, and the interdistrict median bid is published in step 622. If the **lowest bidder** in the present **auction** combines with another bidder at step 624, that bidder joins that other bidder in step 626 before repeating the process. If the **lowest bidder** invokes a **penalty** at step 628, a **penalty** process is conducted in step 406 and the new **lowest** intradistrict **bid** is identified in steps 632 and 634. The new intradistrict **low bid** is published in step 636, and the new **low bid** and summed **bid** for the superior **auction** are calculated and published in step 638, before repeating the process. Now referring to FIG...the intent that they commit to supporting the public policy. In the inter-district sub- **auction** , there is competition between districts C'inter-district auction?'). The separate intra- and inter-district sub- **auctions** **reward** .

Detailed Description

... behavior" (i.e. bid early, bid high, quickly outbid those who outbid you) throughout the **auction**, by ensuring such behavior is **rewarded** throughout the **auction** process.

Additionally, some of the rewards mentioned are themselves innovative and would be new and...informed of the fact that the new high bidder is using proxy bidding. The previous **auction** leader may then choose to bid more than the minimum necessary under the point and **reward** system, to outbid the limit on the winner's proxy bidding. Alternatively, in addition to bidding the minimum necessary under the point and **reward** system, the previous **auction** leader can use his own

proxy bidding, in order to compete against the **high bidder** 's proxy **bidding** . Thus, whoever places the **highest bid** is permitted to acquire the item.

Multi-person

Further embodiments related to multi-person bidding...in

quantity, rather than time of initial bid serving as a tiebreaker in quantity.

Reverse Auction

In a **reverse auction** , the **bidder** who places the **lowest bid** sells the item for that price or performs the service for that price, thus a lower bid is "worth" more than a higher **bid** . Some of the **rules** of the "point and **reward** " would have to be adjusted to be suitable for a **reverse auction** . For example, points are accorded for every second a **bidder** has the **lowest bid** , and for how much they decrement the **lowest bid** . If according points for the worth of a bid, a lower bid should be accorded...

...accomplish this is as follows. There is an initial maximum acceptable bid to begin the **auction** . The points accorded for a particular bid will be based on the value of the initial maximum bid minus the value of that particular bid. For example, if the **auction** begins at a maximum price of \$600, and someone bids \$550, he will receive 50 points for every second he maintains the **low bid** . If the minimum decrement is \$1 and someone lowers the bid from \$450 to \$447...

...predetermined weighing criteria established by the auction house, considering the non-monetary value of the **bid** criteria.

Optional Rules

The point and **reward** system turns the **auction** process into a sort of game, and therefore various elements from different games can be...

Detailed Description
Claims

English Abstract

In both an on-line and a conventional **auction**, an **auctioneer** may encourage **competitive bidding behavior** through the provision of **rewards** to those bidders whose bids meet predetermined criteria. For example, a bidder may be **rewarded** if her bid exceeds a prior bid by a threshold value. An **auctioneer** may further discourage **non-competitive bidding behavior** by penalizing those **bidders** whose bids fall below predetermined standards.

Detailed Description

... relates to auctions, and relates more particularly to systems and methods for rewarding or penalizing **bidders** whose **bidding behavior** during an **auction** session meets predetermined standards.

Background of the Invention

Auctioning has been an accepted method for...

...for the product from a bidder during the auction session; determining, based on a reward **rule**, whether the **bidder** is qualified to receive a **reward**; and if the bidder is qualified, transmitting, to the bidder, an indication that the bidder is qualified to receive the **reward**.

According to a second aspect of the present invention, a system and

While the...

...on-line embodiment, are equally applicable to enhance competitive bidding in any conventional form of **auctioning**. Furthermore, the databases and data stored therein may be rearranged or combined into equivalent structures. Finally, it is to be understood that a **reward** may be provided during a current **auction** or may be awarded subsequent to the current **auction**. Accordingly, it is to be understood that the foregoing description is provided for illustrative purposes...

Claim

... the product from a bidder during the auction session; determining, based on a reward **rule**, whether the **bidder** is qualified to receive a **reward**, and if the bidder is qualified: transmitting, to the bidder, an indication that the bidder is qualified to receive the **reward**.

AuctionBuilder 1.0 from Able Solutions/AbleCommerce is a browser-based toolkit for setting up and running online **auctions**. It builds user-friendly, efficient Web sites that can offer many sophisticated features. Developers can quickly deploy **auction** sites for charity, business to business (B2B), and business to consumer (B2C) applications. **AuctionBuilder** -built **auctions** can use **high bid**, Vickery, Classic Dutch, or Modern Dutch styles. The system offers many browser-based tools for administrators that can simply **auction** setup and maintenance. Administrators can schedule **auctions**, monitor sales from any location, approve **auctions**, or generate financial reports. For end-users, **AuctionBuilder** offers the abilities to view **bid** histories, to retract a **bid**, or to have the system **bid** automatically under user-defined **conditions**. The system also offers **bidders** secure, encrypted payment processing.

Ariba's TD- **Auction** (TM) is an Internet **auction** system originally created by TradingDynamics. TD- **Auction** helps companies reduce the cost of selling goods and lower their inventory costs. Web **auctions** can liquidate

excess inventory. TD- **Auction** enables **auction** sponsors to control the **rules** of **auctions**. It supports anonymous **bidding**, invitation-only **auctions**, and customer segmentation (e.g., preferred bidders). TD- **Auction** users can utilize **auctions** to increase competition among potential buyers. The system can complement existing sales and distribution channels.

PeopleSoft's PeopleSoft (R) 8 Strategic Sourcing, part of the Supply Chain Management product line, allows businesses to streamline request for quote, request for proposal, and other sourcing tasks. It can also be tapped in conducting real-time **auctions**, awarding contracts, and handling purchase orders. PeopleSoft 8 Strategic Sourcing supports **competitive bidding**, allowing businesses to reduce procurement costs. The system also lets procurement managers align purchasing objectives with overall business strategies. The product can track bidder participation and results. PeopleSoft Strategic Sourcing also saves procurement data, allowing companies to reuse sourcing strategies. Information can also be referenced in performance analyses. A demonstration version of PeopleSoft Strategic Sourcing can be accessed through the PeopleSoft Web site.

Auction is a program designed to help record, organize and analyze **auction** bids. Each lot is identified by a lot number, description and catalog value. The bidder information includes a bidder number, name, address, and date of bid. The bid information is entered as bidder number, lot number, and bid. The program identifies the **highest bidder** (and the next two highest), lot by lot, and shows summaries (lot number, bid, and total) for each bidder. Results may be displayed on the screen or printed.

GRADE: Product Analysis, No Rating

A discussion of the advantages to small businesses that are possible with Internet-conducted business-to-business (B-to-B) **auctions** explains that B-to-B **auctions** are very different from the consumer variety. For instance, in B-to-B **auctions**, sellers and purchasers deal in such items as bulldozers, huge rolls of bubble wrap, industrial process control software, huge conference tables, and employees. Recently, **eBay** listed an Internet service provider's (ISP's) complete engineering staff, all of whom could be sold to the **highest bidder**, who, however, had to employ them in the Silicon Valley. B-to-B **auctions** dominate the online **auction** market, and one analysis firm forecasts that the value of goods and services sold in online B-to-B **auctions** will soon exceed the value of those sold in consumer **auctions** by sixfold. The market should be worth \$50 billion by 2002. The popularity of B-to-B **auctions** arises from companies' need to profitably sell off inventory and supplies taking up

space in all types of storage areas, from closets to warehouses. The items include out-of-date equipment, factory seconds, discontinued or repackaged models, and used, liquidated, rebuilt, or spruced-up items. Companies know they can get much more for these items from people who want or need them than from liquidators. Online **auctions** provide a fast easy way to unload these items and can also provide more opportunities for promotion and publicity.

IBM/Part Miner's Free Trade Zone, a new electronic procurement service, assists electronics companies in finding and purchasing supplies more easily and at less expense. Free Trade Zone combines an electronic marketplace, content aggregation site, and hosted application service. It should be available by the end of 1999, says a spokesperson for PartMiner, a spot-marketing company that uses data mining technology to find rare electronic components, and then brokers them to manufacturers. Users of a beta Free Trade Zone site report more efficiency, especially in the time required to find parts or equivalent substitutions. The process of obtaining spec sheets, verifying information, and placing an order used to take two weeks, but not requires only a few minutes. Access for buyers and suppliers is via Web browsers and a hosted application service. Buyers can post requests for quotes on components, and then **'reverse - auction'** them to find the **lowest bidders**. Free Trade Zone also provides a bill-of-materials system with which customers can negotiate prices, generate purchase orders, and exchange invoice data. Customers and suppliers pay nothing for Free Trade Zone, and PartMiner has obtained \$20 million in venture capital to fund the site for its spot-marketing service. If **reverse auctions** do not find enough suppliers, PartMiner will offer to find missing parts and mediate a deal to deliver them.

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

A discussion of online **auctions** emphasizes their potential for fun and good values, as long as attendees keep good sense. They should keep in mind that 'online **auctioneers** play by their own rules. And for some that means there aren't any.' For instance, a top-10 list of frequently reported Internet frauds puts incidents related to Web **auctions** at the top of the list. Online **auction** shoppers should read notices of sites' policies and rules of participation, which are generally posted on the sites. These disclosures often are worded to limit the liability of the **auction** regarding function or fit of products sold. Such **conditions** do not leave successful **bidders** with much recourse if they are disappointed. Buyers also should not expect a warranty unless one is stipulated, and they should make every attempt to verify **condition** or content of products before **bidding**. Several sites provide technical support services for this purpose in advance of the start of bidding. Users who follow this advice and stick to a common sense approach throughout can get bargains at online **auctions**. Among many other factors, bidders should keep in mind what other bidders may be willing to pay, and this ability involves strategies that are hard to define. Some bidders only bid at the last minute, while others start early and guard their positions. One consumer says he 'consistently see(s) items go for more than their retail price,' but when certain precautions are observed, this does not have to happen.

GRADE: Product Analysis, No Rating

A discussion of online **auctions** that cater to the needs of businesses emphasizes that business **auctions** are useful not just for new equipment purchasing, but also for locating spare parts for older or rare equipment. Companies can **auction** off excess or older computer equipment to the **highest bidder** from Auction IT, a site that has over 175 dealers who

participate in **auctions** . **Auction** listings are available only to registered bidders, which means that **auction** participants, unless registered bidders, cannot look at current listings to appraise the value of items before they are **auctioned** . United Computer Exchange also focuses on **auctioning** of computer equipment, and has an excellent search engine that allows users to find equipment according to platform. **Auction** Watchers is an **auction** search site that allows prospective purchasers to use such categories as servers, network hardware, and other components to check out various **auction** sites. When participating in an **auction** , users should be careful of listings that provide little detail about a product, and should consider using escrow services such as i-Escrow, SecureTrades.com, or TradeSafe Online. They ensure that buyer, seller, and **auctioneer** are satisfied with a transaction. If a company's older PC equipment is difficult to sell on an **auction** site, the company should consider donating it. A donation makes the company eligible for a tax deduction for the fair market value of the goods and builds respect for the company in the community.

PRODUCT NAMES: **OpenSite Auction 4.0** (704733

TITLE: **OpenSite is high bidder on Web auctioning**
AUTHOR: Rapoza, Jim
SOURCE: PC Week, v16 n12 p35(2) Mar 22, 1999
ISSN: 0740-1604

RECORD TYPE: Review
REVIEW TYPE: Review
GRADE: A

OpenSite Auction 4.0 from **OpenSite Technologies** is a top-choice World Wide Web **auction** solution that offers powerful and flexible bid models that cater to any **auctioning** style, though the high package prices and complicated administration tasks are weaknesses. Established **auction** Web sites will appreciate **OpenSite's** adherence to standard Web technologies and protocols when migrating to the platform, and though **Auction** is not cheap at \$5,000, it provides many advantages over far more expensive competing developer services and proprietary systems. The program, which was awarded this magazine's top choice award, offers great flexibility and easily provides tools for users to create centralized **auction** house processes. One weakness is that **Auction** requires a fair amount of Web site authoring skills and at least a modicum of **auction** -hosting business models.

A discussion of online **auctions** highlights many **auction** sites on the Web, including those selling general merchandise and those that fund charities. One site owner states that surfers who attend online **auctions** are attracted to and looking for bargains. Business-to-business **auctions** are large revenue producers, and allow companies with an oversupply of industrial commodities or companies needing, for example, many cheap computers quickly to respectively unload their inventory and obtain what they need. Many computer and consumer electronics products are sold at online **auctions**, and at **eBay**, users can trade 24 hours a day. About 1.3 million users have registered with **eBay**, which has more than a million items for sale. GivetoCharity is a worldwide, secure online donation service for nonprofit organizations, and promotes easy access for those who wish to donate online to a favorite charity. WebCharity's goal is to assist charities in profiting from the quickly expanding popularity of Internet **auctions** and the expansiveness of World Wide Web philanthropists. Internet **auctions** can last anywhere from an hour to a week, and have differing formats. For instance, Klik-Klok's Online **Dutch Auction** offers items at a high price while the clock ticks and the items' prices drop until someone buys something. Yankee **auctions** are more common: a few identical items at a high price are offered for sale concurrently, and the **highest bidders** get the goods at the close of the **auction**.

OpenSite Technologies' OpenSite **Auction** is highlighted in a discussion of extranet **auctions** , which are beginning to provide companies with the opportunity to move billions of dollars in first-run and excess goods to registered users who bid for all types of products, including computers and ad time, as well as oil and gas. Online, business-to-business **auctions** should exceed \$5.2 billion in sales in 1998, and will go over \$7.3 billion in 1999, says a report from a research firm. Extranet **auctions** represent a large part of all revenue expended in online **auctions** , which should reach \$52.6 billion by 2002, says the analysis firm. Companies selling **auction** software, including Moai Technologies, are targeting computer and semiconductor industries because quickly moving product cycles can cause inventory management problems. The **auction** market is also reaching commodity industries such as oil and gas. Ingram Micro, a computer distributor, has the **Auction** Block Site that allows resellers to bid on excess inventory that cannot be returned to manufacturers. Media **Auction** , an online seller of broadcast advertising time, uses OpenSite **Auction** software from OpenSite Technologies to allow advertisers to get bargains from last minute **agreements** in **bidding** for unsold media time on networks and stations across the U.S.

RECORD TYPE: Review
REVIEW TYPE: Product Analysis
GRADE: Product Analysis, No Rating

Online **auctions** held on the World Wide Web can help home computer users find the components they want conveniently and at the price they want to pay. For example, one user obtained a DeskJet 850C at about 25 percent off the best price found in stores, after bidding in advance and providing a credit card number to an **auction** 'house' on the Web. Many cost-conscious shoppers use online **auctions** to shop for other items as well, including antiques, art, computers, rare coins, real estate, vacation packages, wines, and other products. They can purchase goods at below market prices from home, while enjoying access to sales all over the world. **Auction** sites generally show items with a description, minimum bid, and final date for all bids. The bid is made in an e-mail message to the seller, or users send in an electronic bid form with the price the bidder is willing to pay on the form. Some sites hold live **auctions** at which users bid in real-time against other bidders on the Internet for each item that goes under the hammer. Reverse and sealed **auctions** are also discussed. Most online **auctions** do not list maximum bids, so users do not know if their bid is the best offer. Some sites have an immediate response feature that tells the bidder if his or her **bid** is the **highest** current **bid** .

Some speculators have been registering Internet domain names for subsequent **auction** to the **highest bidder**. Network Solutions, the agency that oversees domain name registration, will no longer mediate domain name disputes, and will not be held responsible if a domain name infringes on an existing trademark. Brokers have emerged that buy and sell Web names. Regardless of whether a registrant intends to use a domain name or sell it, the registrant still must comply with Network Solutions' rules and legal restrictions against trademark infringement.

Treatment: Theoretical (T)

Abstract: When bidders have a common value or strongly affiliated values for an object or contract being **auctioned** by sealed bids, it is possible that the maker of a rational and apparently winning bid would, upon learning the competing bids, prefer losing the **auction** to honoring his bid. The ability to withdraw a bid, perhaps at a cost, in such circumstances provides a form of "winner's curse insurance". Bidding with such insurance is analyzed, obtaining the general **condition** for rational **bid** withdrawal and sufficient **conditions** for the existence of an equilibrium with more aggressive bidding. Next, the authors define a "compensation **penalties** " bid withdrawal **penalty** scheme and show that with it the bid-taker is better off on the average than if bid withdrawal is impossible. Finally, the authors find equilibrium bidding and withdrawal strategies in a multiplicative model as a function of the magnitude of the bid withdrawal **penalty** and of the bid-taker's likelihood, after a withdrawal, of honoring the second-best bid. This model has cases in which allowing withdrawal at a cost is in the bid-taker's interest and ones in which it is not. (22 Refs)

Essays in multi-unit auction theory

Author: McAdams, David Lloyd

Degree: Ph.D.

Year: 2001

Corporate Source/Institution: Stanford University (0212)

Adviser: Robert B. Wilson

Source: VOLUME 62/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

Descriptor Codes: 0501; 0511

ISBN: 0-493-38297-6

This dissertation consists of three papers that develop the theory of equilibrium in **auctions** of multiple identical objects ("multi-unit **auctions** "). In the first, "Isotone Equilibrium in Games of

Incomplete Information, I develop the basic theory of existence of isotone pure strategy equilibrium (IPSE) in games of incomplete information in which players have multi-dimensional actions and multi-dimensional types. An IPSE exists in any such game in which each player's action set is a finite lattice and interim expected payoff function satisfies (i) the Milgrom-Shannon single-crossing property in his action and type and (ii) quasimodularity in his action. In the second, "Isotone Equilibrium in Multi-Unit Auctions", I apply this result to all commonly studied multi-unit auctions. The key step here is to prove that each bidder's valuation for what he wins is always *modular* and hence quasimodular in his own bid in any multi-unit auction in which the allocation is determined by market clearing. In the third, "Collusive-Seeming Equilibria in the Uniform-Price Auction", I show that the lowest-price (collusive-seeming) equilibria of the uniform-price auction are not robust to certain modifications of the rules. In particular, such equilibria do not exist when supply is increasable or when the payment rule is perturbed to reward aggressive bidding.

ESSAYS IN FIRM BEHAVIOUR: COOPERATIVE R&D AND COMPETITIVE BIDDING

Author: GUNDERSON, ALAN L.

Degree: PH.D.

Year: 1997

Corporate Source/Institution: QUEEN'S UNIVERSITY AT KINGSTON (CANADA) (0283)

Source: VOLUME 58/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL. PAGE 3657. 129 PAGES

Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

ISBN: 0-612-20562-2

The thesis comprises three essays which examine firm behaviour in the context of investing to acquire market power through developing or using new technology. In the first essay (chapter 2) we analyze how competition in the market for a new product innovation affects the formation and size of Research Joint Ventures (RJVs). Research efforts are directed at acquiring the patent for the technology to produce a new product. Firms conducting research benefit from cooperation through the creation of synergies which increases the probability of innovating. However, cooperation also reduces the reward to innovation since firms must share the revenues from the post-innovation product market. We show that market performance can be improved if RJVs include ancillary restraints which limit future competition among members. This occurs if the deadweight loss experienced in the product market is outweighed by the elimination of duplicative research. For industries with a sufficiently large number of firms, only a unique RJV size can exist in equilibrium. However, for small industry sizes multiple equilibria can exist. Furthermore, the size of the RJV relative to the size of the industry, increases in the amount of synergies made possible from cooperation. When the social surplus from the innovation exceeds the monopoly rent, too much cooperation among firms may occur in equilibrium.

The second essay (chapter 3) identifies conditions where cooperative behaviour in research and development improves market performance in a differential game where firms sell differentiated products over time. Research serves to reduce marginal production costs and increases a stock of knowledge common to an industry. We analyze and compare three different scenarios; (i) firms cooperate in R&D by forming a Research Joint Venture which maximizes joint profits; (ii) firms compete in R&D using feedback strategies; and (iii) firms compete in R&D using open-loop strategies. In

the steady-state, cooperative R&D exceeds competitive R&D when the spillover rate is above a certain threshold. This threshold is largest when products are very close substitutes and the discount rate is large. Given the amount of product differentiation there exists a range of spillovers for which cooperation improves market performance at every moment in time. For spillovers greater than this range cooperation improves market performance in the steady-state but perhaps not over the entire time horizon. R&D competition in feedback strategies more closely approximates the cooperative solution than competition in open-loop strategies.

In the final essay (chapter 4) we examine and compare the effects of a seller concealing more or less information during the course of an **auction**. The **auction** allows firms to bid for an asset which they must acquire before they can use the technology they have developed from previous R&D. We show that a firm benefits from jump bidding only if its distribution of valuations is discontinuous and if some information, such as the identity of the bidders or the amounts of all valid **bids** except the **highest**, is concealed during the course of the bidding. The more information that a seller conceals, the higher a bidder is willing to jump bid in order to signal its valuation and the larger is the set of jump bid equilibria. Finally, we show that the expected revenue of the seller decreases when a jump bid equilibrium exists.

ABSTRACT INDICATOR: Abstract

ABSTRACT: The Federal Communications Commission currently utilizes a simultaneous multi-round ascending bid **auction** to allocate Personal Communication Services licenses. In the **auction**, participants are allowed to withdraw standing bids at a **penalty**. The **penalty** is equal to the maximum of zero or the difference between the value of the withdrawn bid on a license and the **highest bid** after the withdrawal on that license. The withdrawal **rule** is designed to assist **bidders** wishing to assemble combinations of licenses who find themselves stranded with an assortment of licenses for which their bids sum to more than their value. This paper reports results of experiments that examine the effect of the withdrawal rule in environments in which losses can occur if packages of licenses must be assembled piecemeal. The experiments demonstrate that there is a tradeoff with using the rule: efficiency and revenue increase, but individual losses are larger. Furthermore, the increased efficiency does not outweigh the higher prices paid so that bidder surplus falls in the presence of the withdrawal rule.

ABSTRACT INDICATOR: Abstract

ABSTRACT: The resource rent tax is a proposed tax instrument for offshore oil and gas leases. Essentially, it is an ex post fiscal device levied on the investor's net cash flow after a specified threshold rate of return on his investment has been achieved. The tax base is obtained by using the specified threshold rate to compound forward the investor's net cash flow until a positive cumulative figure is reached. Subsequently, a resource rent tax is applied to the positive net

present value as it is realized. While the resource rent tax rate is established by the government, the threshold rate of return may be determined in one of three ways. It could be fixed by the government, negotiated between the government and the investor, or it may be **auctioned** via **competitive bidding**. This paper is concerned with the incentive effects of the resource rent tax. More specifically, I examine the critical role played by property rights in the efficiency of the system. To this end, a partial equilibrium framework is employed to investigate how a resource is valued and how capital inputs are allocated by a firm under a resource rent tax. The model is used to analyze the impact of public regulation on private decision making and the results are compared with a system of **competitive cash bonus bidding** now used to award leases to federal tracts. My results support the broad proposition that alternative institutional arrangements are important to consequent enterprise conduct and performance. Where property rights are inhibited, as is the case under the resource rent tax, a direct connection between productivity and **reward** is severed and production will be less economically efficient. Further, the incentive to detect and police managerial conduct is also reduced. Ultimately, these potential perverse incentive effects of the resource rent tax reduce the value of the lease and lead to lower government revenue.

ABSTRACT INDICATOR: Abstract

ABSTRACT: We reply to Harrison's and to Kagel's and Roth's critique of our work in **auction** theory and behavior. Harrison's metrics require cardinality to justify his statement that foregone utility is "too small"; as heuristics to aid experimental design, we show why his measures are not informative. Further, our experiments with variable **rewards** and opportunity costs show that, contrary to Harrison's argument, subjects do not become more risk neutral with increased **reward**. Kagel's and Roth's critique contains many errors based primarily on their misunderstanding of various risk averse models of Nash equilibrium **bidding behavior**. Thus, they report data claiming to support, but which in fact are contrary, to Harrison. They also report new tests which claim to falsify CRRAM, but because of their misinterpretations, are not inconsistent with CRRAM.

DOCUMENT TYPE: Journal Article

ABSTRACT INDICATOR: Abstract

ABSTRACT: Consistent with a model of asymmetric risk aversion, subjects in first price **auctions** consistently bid above the risk neutral Nash prediction. It has been argued that this is due to low opportunity cost of deviating from the risk neutral bid. The authors increase opportunity cost (and payoff levels) by factors of 0, 1, 5, 10, and 20 from the normal levels generating payoffs up to \$250 for risk neutral subjects and observe an insignificant increase in the slope of individual bid functions. The RMSE of bids declines significantly. This is consistent with a **reward /decision cost model of bidding behavior**.
